Preferred setup

Club / festival environment

- Professional sound system suitable for full-range dance music.
- Pioneer CDJ setup with mixer, already connected to the sound system.
- Booth monitor if available.
- Someone on site who knows the system and can help with line check.

Most ecstatic dance setups

- Please arrange a Pioneer DDJ controller for laptop plug-and-play where possible.
- I travel with my computer and prefer to keep the setup light.
- Please have the controller connected to the sound system before arrival.
- A simple soundcheck / line check is enough if everything is prepared.

Backup option

If necessary, I can bring my own controller with my computer. In that case the organizer needs to provide a working connection into the stereo / PA system, normally RCA cables or the correct adapter for the venue system.

Please confirm before the event

- What sound system is being used?
- Will there be CDJs + mixer, a Pioneer DDJ controller, or should I bring my own controller?
- Which cable input is available into the mixer / stereo / PA?
- Who is the technical contact on arrival?
- When can I do a quick line check?

Updated June 2026 · <https://dj.srenneh.com>

Useful but not dramatic

- Water nearby.
- A small stable table / booth space.
- Enough time to plug in calmly before people arrive.
